Note: the projection will have a 1:2 format

Abstract:

In the last 20 y. prosthetic dentistry had a dramatic improvement.

At the same time the demand of restorative dentistry for aesthetic reasons is exponential increased.

The state of the art, nowadays, permits to create dental Manu facts (prosthesis) with the same appearance of natural teeth.

But the aesthetic results in a prosthetic work are oft in conflict with his invasivity.

The challenge today and for the future in dentistry of is to obtain the aesthetic satisfaction of the Patients with the minimal invasivity and the long term results.

The discussion with the Patient to clarify his expectation and to present the different possibility, and the inter-disciplinary work coordination permit to have a biological approach, preserve the dental structure and improve the oral function

I thank You for the opportunity and I wish You a good 2009

Yours,

Giuseppe Allais
